

Coffee Rewards - Offer Performance

Offer funnel and commercial effectiveness overview

Completion Rate (%)

44.02

Median Time to Complete (Hours)

48.00

Total Reward Cost (USD)

164.68K

Offer Conversion Funnel

Completion Share vs Reward Cost (%)

RECOMMENDATION: Shift budget allocation from BOGO toward discount offers. Discount delivers 53% of completions while accounting for only 31% of reward cost, making it approximately 2.5× more cost-efficient per completion. Use BOGO selectively when faster response is strategically important; it completes 18 hours sooner but requires a substantially higher break-even margin.

DIRECTIONAL ANALYSIS: Actual product margins and randomized treatment assignment are unavailable.

Coffee Rewards - Funnel & Response

Customer drop-off, response speed and performance by offer type and channel

Volume by Funnel Stage and Offer Type

View and Completion Rates by Channel (%)

View and Completion Rates by Offer Type (%)

Median Response Time by Offer Type (Hours)

KEY TAKEAWAY: Discount offers achieve a higher completion rate than BOGO (59% vs. 51%) but take 18 hours longer to complete. Completion rates vary only slightly across channels (44–49%), while viewing rates vary considerably (73–93%), suggesting that channel choice affects initial engagement more than final conversion.

Coffee Rewards - Customer Segments

Completion performance across age, income, gender and demographic coverage

Completion Rate by Age Group (%)

Completion Rate by Income Level (%)

Completion Rate by Gender (%)

Cohorts With vs. Without Demographic Data (%)

KEY TAKEAWAY: Completion increases with income (35% below \$40K vs. 62% at \$100K+) and stabilizes near 52% after age 50. Customers without demographic data view offers at a similar rate (80% vs. 75%) but complete far less often (12% vs. 49%), highlighting a potential targeting or data-quality gap. Male customers also show a lower completion rate (43% vs. 55–56%).

Coffee Rewards - Offer Economics

Reward efficiency, modeled returns and profitability thresholds

BOGO Reward Cost per Received (USD)

3.72

Discount Reward Cost per Received (USD)

1.68

BOGO Break-even Margin (%)

79.28

Discount Break-even Margin (%)

28.14

Modeled Sales per Reward Dollar

Net Contribution by Gross Margin Scenario (USD)

KEY TAKEAWAY: Discount is the more economically resilient offer. It costs \$1.68 per received offer versus \$3.72 for BOGO, generates \$3.55 in modeled sales per reward dollar versus \$1.26, and breaks even at an estimated 28% gross margin versus 79% for BOGO. Directional model only: actual product margins and randomized treatment assignment are unavailable.
